[Methodology](#)

Key statistics

In seasonally adjusted terms for the March quarter 2025:

- total jobs decreased 0.2% to 16.3 million
- filled jobs decreased 0.1% to 15.9 million
- secondary jobs decreased 4.2% to 1.1 million
- proportion of vacant jobs decreased to 2.0%
- multiple job-holders decreased 2.8% to 963,100
- hours worked increased 0.3% to 6.0 billion hours.

Key statistics - Seasonally adjusted

	Mar-25	Quarterly change (%)	Annual change (%)
Jobs			
Total jobs	16,261,000	-0.2%	1.7%
Filled jobs	15,931,500	-0.1%	2.0%
Job vacancies	329,600	-4.0%	-9.4%
Main jobs	14,869,500	0.2%	2.4%
Secondary jobs	1,061,900	-4.2%	-3.8%
Proportion of vacant jobs	2.0%	na	na
People			
Employed people	14,896,800	0.4%	2.4%
Multiple job holders	963,100	-2.8%	-1.1%
Multiple job holding rate	6.5%	na	na
Hours			
Hours actually worked	5,961.6 million	0.3%	2.3%
Payments			
Average income per employed person	\$24,755.10	1.4%	4.0%

Key statistics - Trend

	Mar-25	Quarterly change (%)	Annual change (%)
Jobs			
Total jobs	16,302,600	0.3%	2.0%
Filled jobs	15,969,300	0.3%	2.3%
Job vacancies	333,300	-1.2%	-8.4%
Main jobs	14,887,500	0.4%	2.5%
Secondary jobs	1,081,900	-0.9%	-0.8%
Proportion of vacant jobs	2.0%	na	na
People			
Employed people	14,911,500	0.6%	2.5%
Multiple job holders	977,800	-0.2%	1.7%
Multiple job holding rate	6.6%	na	na
Hours			
Hours actually worked	5,963.6 million	0.3%	2.2%
Payments			
Average income per employed person	\$24,689.50	1.0%	3.6%

Future improvements to the Labour Account

In 2024 the ABS was funded to expand the Labour Account to provide estimates of the total hours spent on unpaid care and their monetary value. These measures will improve the visibility of the contribution of unpaid care to society and the economy, alongside the extensive information on paid work. This funding was also directed at modelling sex and age components to existing Labour Account data, to provide a meaningful point of comparison with estimates of unpaid care.

An initial [information paper on unpaid care \(/statistics/detailed-methodology-information/information-papers/measuring-labour-contribution-unpaid-care-labour-account\)](/statistics/detailed-methodology-information/information-papers/measuring-labour-contribution-unpaid-care-labour-account) was published in November 2024, it presented a first set of experimental estimates of unpaid care in Australia for June quarter 2021, based on preliminary concepts and methods. Since this time, the ABS has undertaken a consultation process via the Consultation Hub and further refined the first estimates of unpaid childcare, in addition to developing estimates of unpaid adult care and producing a time series of unpaid care.

A further information paper will be published on 27th June 2025. This information paper will present:

- additional experimental estimates of unpaid care in Australia for June quarter 2006 to September quarter 2024,

- outcomes of the Consultation Hub process,
- full details of models developed for sex and age estimates in the Labour Account, and
- information on further plans and future directions.

State article

A State level feature article is being planned to accompany the next release of the Labour Account, Australia. The article will contain updated modelled indicative state and territory level industry jobs and hours worked estimates up to and including March quarter 2025. Previous editions of the [state article \(https://www.abs.gov.au/articles/modelled-state-and-territory-jobs-and-hours-worked-estimates-industry\)](https://www.abs.gov.au/articles/modelled-state-and-territory-jobs-and-hours-worked-estimates-industry) contained data up to the June quarter of the relevant year, however, due to changes in source data availability this will not be possible for the next Labour Account release.

Guide to labour statistics

The Labour Account is the best source of quarterly industry and sector data. To learn more about our different labour measures, their purpose and how to use them, see our [Guide to labour statistics \(/statistics/understanding-statistics/guide-labour-statistics#data-impacts-and-changes\)](/statistics/understanding-statistics/guide-labour-statistics#data-impacts-and-changes). It provides summary information on labour market topics including [Industry employment guide \(/statistics/understanding-statistics/guide-labour-statistics/industry-employment-guide#data-impacts-and-changes\)](/statistics/understanding-statistics/guide-labour-statistics/industry-employment-guide#data-impacts-and-changes) data.

Factors affecting interpretation

Revisions this quarter

Data in the four quadrants of the Labour Account have been revised from the previously published estimates.

Revisions may be attributable to a range of factors, these include:

- revisions to Overseas Arrivals and Departures data
- revisions to data from the quarterly Australian National Accounts
- improvements to the seasonal adjustment process

Further information on revisions in the Labour Account can be found in [Labour Statistics: Concepts, Sources and Methods \(/statistics/detailed-methodology-information/concepts-sources-methods/labour-statistics-concepts-sources-and-methods/2023/methods-four-pillars-labour-statistics/australian-labour-account#revisions-in-the-australian-labour-account\)](/statistics/detailed-methodology-information/concepts-sources-methods/labour-statistics-concepts-sources-and-methods/2023/methods-four-pillars-labour-statistics/australian-labour-account#revisions-in-the-australian-labour-account).

Revisions to published estimates are shown in Table 22 in the Data downloads section.

The latest industry benchmark data in the Labour Account is for the 2022-23 financial year. Estimates from September quarter 2023 onwards are subject to revisions as indicator data is progressively replaced with more definitive benchmark information.

Stock and flow estimates

The Labour Account includes a combination of stock and flow time series estimates. A stock series is a measure of certain attributes at a point in time. A flow series is a measure of activity over a given period.

The Jobs and People quadrants contain stock time series estimates measuring change from the end of the proceeding quarter to the end of the current quarter. The Hours and Payments quadrants include flow time series estimates and measure all activity across the reference quarter.

For more information, please see [Time series data \(https://www.abs.gov.au/statistics/understanding-statistics/statistical-terms-and-concepts/time-series-data\)](https://www.abs.gov.au/statistics/understanding-statistics/statistical-terms-and-concepts/time-series-data).

Jobs

In seasonally adjusted terms for the March quarter 2025:

- filled jobs decreased by 0.1%, following a 0.3% rise in the December quarter 2024. Filled jobs grew by 2.0% through the year
- the number of main jobs increased by 35,900 (or 0.2%)
- the proportion of vacant jobs decreased to 2.0%
- the number of public sector jobs decreased by 0.1%, while the number of private sector jobs decreased by 0.2%.

Total jobs

In seasonally adjusted terms for the March quarter 2025, the total number of jobs decreased by 24,700 (or 0.2%).

This consisted of a decrease of 13,900 job vacancies and a decrease of 10,800 filled jobs.

Total jobs, by industry, seasonally adjusted

Filled jobs

In seasonally adjusted terms for the March quarter 2025, the number of filled jobs decreased by 10,800 to 15.9 million.

Filled jobs, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

Filled jobs, by industry, March quarter 2025, seasonally adjusted

	Filled jobs ('000)	Quarterly change (%)	Annual change (%)
Agriculture, forestry and fishing (A)	463.5	-0.5	2.0
Mining (B)	225.2	-1.9	-0.5
Manufacturing (C)	917.3	-0.6	-0.1
Electricity, gas, water and waste services (D)	141.9	1.2	6.3
Construction (E)	1,249.6	1.3	1.1
Wholesale trade (F)	558.8	-0.8	-2.9
Retail trade (G)	1,515.6	-0.8	1.6
Accommodation and food services (H)	1,144.6	-0.6	0.8
Transport, postal and warehousing (I)	709.0	-1.0	2.5
Information media and telecommunications (J)	205.0	1.9	0.6
Financial and insurance services (K)	517.9	-0.1	1.4
Rental, hiring and real estate services (L)	290.9	-1.0	0.0
Professional, scientific and technical services (M)	1,317.6	1.5	1.5
Administrative and support services (N)	1,065.3	0.7	0.8
Public administration and safety (O)	876.0	-0.3	4.1
Education and training (P)	1,269.0	0.0	3.4
Health care and social assistance (Q)	2,627.1	-0.4	5.8
Arts and recreation services (R)	263.4	0.7	-9.4
Other services (S)	573.7	-0.3	3.4
Total all industries	15,931.5	-0.1	2.0

Main and secondary jobs

In seasonally adjusted terms for the March quarter 2025:

- main jobs increased by 35,900 (or 0.2%)
- secondary jobs decreased by 46,700 (or 4.2%)
- the proportion of secondary jobs to filled jobs decreased to 6.7%.

The three industries with the highest number of secondary jobs were Health care and social assistance, Administrative and support services, and Education and training.

Main and secondary jobs, by industry, seasonally adjusted

Secondary jobs can be held by people who have their main job in the same or a different industry.

Statistical discrepancy - Filled jobs

The Labour Account compiles independent estimates of the number of filled jobs from both a household and business perspective. The difference between these two estimates is referred to as the "statistical discrepancy". The household estimates of filled jobs are considered the best measure of labour market activity at the total economy

level, while business sources are considered more reliable estimating the distribution of jobs across industries. As a result, the Labour Account filled jobs estimates are constrained (equivalent) to the household side.

The discrepancy between the two sources is reduced to zero through the balancing processes of the Labour Account, producing a single harmonised or "balanced" number of filled jobs. The balanced estimate of filled jobs incorporates the advantage of the industry distribution derived from business side data, whilst constraining to a total economy estimate sourced from household side data. In original terms the discrepancy between household sources and business sources was 209,000 jobs in the March quarter 2025, or 1.2% of the household estimate.

Filled jobs discrepancy, original

Balancing decisions for Rental, hiring and real estate services and Other services were mostly based on household survey sources. All other industries were mostly based on business survey sources.

People

In seasonally adjusted terms for the Match quarter 2025:

- the total number of employed people increased by 0.4% to 14.9 million
- the number of multiple job holders decreased by 2.8%
- unemployed people increased by 11,300 people to 606,000.

Employed people and multiple job-holders, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

The three industries with the highest number of employed people in the March quarter 2025 were Health care and social assistance, Retail trade, and Professional, scientific and technical services.

Employed people, by industry, seasonally adjusted

Hours

In seasonally adjusted terms for the March quarter 2025, the total number of hours actually worked increased by 15.2 million hours (or 0.3%) to 6.0 billion hours.

Hours actually worked, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

The three industries with the highest number of hours actually worked in the March quarter 2025 were Health care and social assistance, Construction, and Professional, scientific and technical services.

Hours actually worked, by industry, seasonally adjusted

Quarterly hours worked per job, by industry, seasonally adjusted

Payments

The Labour Account Payments quadrant presents the costs incurred by enterprises in employing labour, and the income received by people from its provision. Total income consists of compensation of employees and labour income from self-employment. The addition of other related costs to employers to total income will derive total labour costs.

In seasonally adjusted terms for the March quarter 2025:

- total labour income increased by \$6,594 million (or 1.8%) to \$368,771 million
- the average labour income per employed person increased by 1.4% to \$24,755
- total compensation of employees increased by 1.5% to \$339,226 million
- labour income from self-employment increased by 5.5% to \$29,545 million
- total labour costs increased by \$6,610 million (or 1.7%) to \$392,460 million.

Total labour income, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

The three industries with the highest total labour income in the March quarter 2025 were Health care and social assistance, Professional, scientific and technical services, and Construction.

Total labour income, by industry, seasonally adjusted
